

Hexham Wind Farm

FACT SHEET

Historic Heritage

The proposed Hexham Wind Farm is located between Hexham, Caramut and Ellerslie in the Moyne Shire in south-west Victoria. If approved, the Project would incorporate up to 106 wind turbines with an approximate height of up to 260 metres from ground to blade tip. The proposed Project also includes an on-site terminal station and Battery Energy Storage System (BESS) and other associated infrastructure.

As part of the Victorian government's planning and approvals process for major projects, Wind Prospect is preparing an Environment Effects Statement (EES) for the proposed Hexham Wind Farm. An EES is a requirement under the *Environment Effects Act 1978*, and includes a detailed assessment of a wide range of environmental and social assessments such as biodiversity, ecology, historic heritage, Aboriginal cultural heritage, landscape and visual amenity, traffic and transport, noise, socioeconomic and surface and groundwater.

To complete the assessments, considerable research and consultation is being undertaken to avoid and mitigate any potential adverse effects on the environment and the social fabric of the community during construction, operation and decommissioning of the proposed Project. Wind Prospect recognises the value of the natural and built environment in which the proposed Project is based and understands and respects the community's desire to protect both the environmental and social landscape that has existed for many years.

As part of the EES, a Historic Heritage Impact Assessment (HHIA) is being finalised in accordance with the Victorian Government Planning Minister's scoping requirements for the assessment of environmental effects, the *Heritage Act 2017*, the *Planning and Environment Act 2017*, and other relevant government approvals and statutory processes. The aim of the HHIA is to identify, assess, preserve and manage historic heritage and historic archaeology, if present, at the Project site.

How the assessment has been carried out

Extensive studies and fieldwork assessments have been undertaken to identify potential historic heritage or historical archaeological sites within and adjacent to the proposed Project area.

Desktop research has been used to develop a model to predict the likelihood of historic heritage values being present from different historical periods from the 1840s up to the 1960s. Two fieldwork assessments have been completed, including:

- An initial site visit on 19 May 2011 to assess the area in terms of prior disturbance and archaeological potential for historic places and historic archaeological sites.
- A ground surface survey of the study area from 24 June to 18 July 2019, in accordance with Heritage Victoria's *Guidelines for Conducting Historical Archaeological Surveys*.

Since 2019, the indicative layout of the Project site has evolved and further fieldwork assessments will be undertaken as required.

Historical survey investigation area

LEGEND

-  Turbine location
-  Project boundary
-  6 km wind turbine distance radius
-  Terminal station and BESS
-  Proposed quarry area
-  Internal overhead powerlines
-  500kV Moorabool-Heywood transmission line

Preliminary findings

The preliminary findings from research and fieldwork assessments indicate that no known historic heritage or historic archaeological sites will be impacted by the proposed Project. Key preliminary findings from the HHIA include:

- No historic heritage places or historic archaeological sites were identified within the surveyed infrastructure areas.
- There are a number of registered historic heritage places along the activity area boundary and nominated access roads, including Stone Mileposts, Merrang Homestead, Burchett Creek Bridge, Youl's Creek Bridge, and Former Temperance Hall. The project is not expected to impact any of these places.
- No unknown historic sites were discovered during the background review, site visit and field work survey. While this does not mean that there are no unknown historic sites, the lack of evidence to date means that the likelihood of discovery is low. Management measures have been developed to protect unknown sites if they are found in future site investigations or during the construction phase, should the proposed Project be approved.

Managing adverse effects

Based on the assessment findings, mitigation measures are recommended to protect known and unknown historic cultural heritage sites from adverse effects. Mitigation measures include:

Preparation and adherence to a *Heritage Management Plan* to avoid or minimise any potential adverse effects on registered historic places and unidentified historic archaeological sites.

Monitoring the Project's potential to impact registered historic sites in the vicinity of the activity area and undertaking ongoing consultation with Heritage Victoria to ensure the appropriate approvals are met if there is potential for adverse effects.

Developing an *Unexpected Finds Protocol* for new historic archaeological material if discovered. Wind Prospect will also consult with Heritage Victoria to ensure the site is appropriately protected, examined and recorded.

Next steps

The final Historic Heritage Impact Assessment will be submitted as part of the EES documentation for review and assessment by the Planning Minister. The Minister will place the EES and all technical assessments on public exhibition for a period of 30 days. Feedback received from the community during the public review period will be summarised in a Submissions Report and considered as part of the Minister's Assessment of the Project.

Have your say

The environmental, social and economic technical studies are being finalised and we welcome you to have your say on the proposed Project. You will be provided with advance notice of the EES exhibition and the formal opportunity to submit a submission, however you can provide feedback at any time by getting in touch with the Project team by email, phone or mail.

We will be out in the community in the lead up to and during the public exhibition period to answer questions about the proposed Project, the EES, technical studies and any other queries you may have.

Visit the Project website for more information on our upcoming in-region engagement activities.

Wind Prospect respectfully acknowledges the Traditional Owners of the land on which our office and each of our projects are located. We also acknowledge and uphold their continuing relationship to the land and pay our respect to their Elders past, present and emerging.
